IDRIS PAUL KWAYA QUIENDUM

Software Engineer | Full-Stack | Cloud & Backend Systems

Phoenix, AZ | 480-562-7514 | quiendum@gmail.com | linkedin.com/in/idris-paul-k-637185335 | github.com/idrisp1

PROFESSIONAL SUMMARY

Full-stack software engineer with 4+ years of post-graduation professional experience and a track record of delivering production systems across healthcare, SaaS, fintech, and e-commerce, including contract work dating back to 2019. Strong backend foundation in Node.js, PostgreSQL, and AWS with hands-on experience designing REST and GraphQL APIs, containerized deployments, and HIPAA-compliant data architectures. Proven ability to own end-to-end delivery, reduce system latency, and ship reliable software in fast-moving environments.

PROFESSIONAL EXPERIENCE

Application Developer | **JEZZOB Behavioral Health LLC** | Phoenix, AZ *Oct 2022 – Apr 2026*

Live Production URL: jezzobhealthcare.org

- Owned end-to-end development of a HIPAA-compliant patient intake, scheduling, and progress-tracking platform serving 3 clinical teams and 1,200+ active patients.
- Reduced average API response time by 35% by replacing unindexed full-table scans with composite-indexed PostgreSQL queries and introducing server-side pagination across the patient records module.
- Implemented a JWT and RBAC authentication system enforcing least-privilege access across 5 user roles; passed internal security audit with zero critical findings.
- Containerized core backend services with Docker and deployed to AWS EC2, cutting deployment time from approximately 3 hours to 25 minutes and eliminating environment parity failures.
- Designed a secure REST API layer for real-time patient data access with input validation, rate limiting, and audit logging to meet healthcare compliance requirements.
- Partnered with the clinical operations director to translate 12 paper-based workflows into a structured PostgreSQL data model, eliminating manual data entry errors across the intake pipeline.

Technologies: Node.js | PostgreSQL | AWS (EC2, RDS, S3) | Docker | JWT | RBAC | REST APIs

Software Engineer | **Independent Contractor (Freelance - Nights & Weekends, Concurrent with Full-Time Roles)** | Remote *Jan 2020 – Present*

- Delivered 8+ full-stack production systems across healthcare, fintech, SaaS, and e-commerce; 3 platforms reached 10,000+ monthly active users within 6 months of launch.
- Introduced Redis write-through caching on a SaaS scheduling product's highest-traffic query paths, cutting average API latency from 820ms to 310ms (62% reduction) and improving user-perceived performance under peak load.
- Designed an event-driven microservices architecture on AWS Lambda and SQS for a fintech client, processing 50,000+ monthly transactions with 99.97% uptime and sub-200ms average processing time.
- Built an OAuth 2.0 and JWT authentication system with refresh-token rotation for a healthcare SaaS platform; the solution passed a third-party HIPAA security review on the first submission.
- Architected and deployed cloud-native microservices on AWS, consolidating redundant infrastructure and reducing monthly cloud spend by approximately 30%.
- Established CI/CD pipelines via GitHub Actions, enabling automated test runs and zero-downtime blue-green deployments across 4 client environments.
- Mentored 3 junior engineers on API design, database modeling, and code review practices; introduced team-wide coding standards adopted across 2 organizations.

Technologies: Node.js | TypeScript | Python | React | PostgreSQL | MongoDB | Redis | AWS | Docker | Kubernetes | GraphQL | CI/CD | OAuth 2.0

Full-Stack Engineer (Contract) | **CareScrubs Uniforms** | Remote *Feb 2019 – Nov 2019*

Live Production URL: carescrubsuniforms.com

- Built a production e-commerce platform from scratch handling product catalog, cart, and checkout flows; the platform launched within 5 months and supported real-world business operations from day one.

- Integrated Stripe payment processing with webhook-based order confirmation, reducing failed payment errors by implementing idempotent transaction handling.
- Optimized the frontend bundle size and image delivery pipeline, achieving a sub-2-second first contentful paint on mobile, a 45% improvement over the initial build.

Technologies: React | Node.js | Express | MongoDB | Stripe | HTML5 | CSS3 | REST APIs

ENGINEERING PROJECTS

Dawn Podcast FM TV: Real-Time Broadcasting Platform
GitHub: github.com/idrisp1/DawnpodcastFMTV

- Architected a low-latency live streaming system using WebRTC peer-to-peer media pipelines with STUN-based signaling, supporting multi-user audio and video sessions with live chat and reactions.
- Designed the real-time signaling layer with Socket.IO, handling concurrent session coordination with sub-100ms event propagation under test load.
- Built a full-stack platform (Flask backend, React frontend) with session management, user dashboards, and broadcaster controls, deployed end-to-end as a standalone production service.

Healthcare Data API Gateway (Personal Project): Backend Systems Project

- Designed a rate-limited REST API gateway for patient data aggregation with JWT authentication, request queuing, and PostgreSQL-backed audit logs.
- Implemented connection pooling and query optimization, reducing database load by 40% under simulated concurrent access patterns.
- Wrote an integration test suite covering authentication flows, error handling, and edge cases, achieving 88% code coverage.

Cadens Health & Wellness: Client Backend Integration
Live Production URL: cadenshealth.com

- Engineered a serverless backend on AWS Lambda and API Gateway handling referral intake, appointment coordination, and contact routing across 3 facility locations, integrated with the client's frontend via REST webhooks with all business logic custom-built.
- Built Twilio-powered communication workflows automating SMS and email notifications for clinical staff, eliminating manual referral handoffs across 6+ behavioral health service programs.
- Designed a PostgreSQL-backed intake data layer with JWT-secured endpoints for sensitive patient information, serving specialized populations including LGBTQ+, trauma survivors, and court-referred individuals.

Technologies: Node.js | AWS Lambda | API Gateway | PostgreSQL | Twilio | REST APIs | Webhooks | JWT

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL
Frontend: React, HTML5, CSS3, Responsive Design
Backend & APIs: Node.js, Express, Flask, REST, GraphQL, gRPC (familiar)
Databases: PostgreSQL, MongoDB, Redis; query optimization, indexing, connection pooling
Cloud & DevOps: AWS (EC2, Lambda, S3, RDS, SQS), Docker, Kubernetes, GitHub Actions, CI/CD
Architecture: Microservices, Event-Driven Architecture, API Gateway Design, WebRTC, Socket.IO
Security: OAuth 2.0, JWT, RBAC, HIPAA-compliant data handling
Testing: Jest, Pytest, Integration Testing, Load Testing fundamentals

EDUCATION

M.S. Computer Science | Grand Canyon University, Phoenix, AZ *(In Progress, Aug 2025 – Present)*
B.S. Computer Science | University of Buea, Cameroon *Oct 2018 – Oct 2022*

CERTIFICATIONS

Google Cloud Certified – Professional Cloud Developer | Valid through June 2028

ADDITIONAL

U.S. Work Authorization | No Sponsorship Required | Open to Relocation
